Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 7/5/07 have been fully considered but they are not persuasive. Applicant repeats the argument that there are numerous differences between the process of making the Van Phan product and the claimed product and thus, the Examiner cannot have a sound basis for believing the products are the same. However, the Examiner has referenced sections of Van Phan (col. 6, line 10 through col. 7, line 41; col. 9, lines 5-57; col. 10 lines 13-60; col. 18, lines 20-41; col. 19, lines 30-34; col. 21, lines 35-51) where Van Phan teaches materials similar to the materials and structure similar to the claimed invention. Additionally, support for said presumption is found in the use of like materials (i.e. polyacrylate based foam, initiator, monomers, surfactants, and the methods for construction disclosed in Van Phan). Applicant again cites paragraphs 0027, 0028, 0038, and 0039 of the specification as providing considerable detail as to how the polyacrylate-based foam of the embodiments of the present invention are constructed. However, as previously stated, Applicant's arguments are not commensurate with the scope of the claims. Applicant argues Van Phan teaches away from the claimed invention, and expressly Van Phan teaches densities lower than the claimed values. Although Van Phan may teach lower densities, Van Phan still teaches a foam density of about 0.5 g/ccc and additionally teaches the density can be modified by controlling certain foam composition and processing parameters. Therefore, it would be within the level of one having ordinary skill in the art to modify the foam density based on the teaching of Van Phan. Modifying the foam with a higher density would provide a thinner, more compact.
